

# Thank you for ordering from T&M

## Gardening Accessories

Our gardening accessories are chosen with your gardening needs in mind. We believe that these products will enable you to grow, sow and display your Thompson & Morgan plants to be their absolute best.

### Eezee™ Greenhouse

1. Unfold the plastic greenhouse cover from the bag.
2. Extend both poles. Connect the middle sections of the pole first, and continue to connect each section until fully extended. Lay one pole to one side.
3. Slide one end of one greenhouse pole through the green sleeves, ensure it goes to the top and feeds through the middle hoop at the peak of the greenhouse roof (see fig 1). Continue to slide through the opposite green sleeve onto the other side. Repeat with the other pole (fig 2). Push until all poles are at equal lengths.
4. Raise all 4 greenhouse poles and attach them to the metal rings at the end of each pole (see fig 3). Clip the greenhouse to the poles with the plastic clips (3 each pole), beginning at the bottom and moving to the top (see fig 4).
5. Using the 4 thicker pegs, stake the greenhouse down through the corner rings and each of the 4 green corner supports. Next, stake the green side supports along the sides of the greenhouse (fig 5, 6 & 7). Ensure the pegs are inserted at a 45 degree angle.
6. Untie the guide ropes on each corner and secure them to the ground (fig 8). It is important to ensure the pegs are inserted at a 45 degree angle, 2ft away. Adjust them by pulling the plastic holder downwards. Adjust the tension via the sliding clip. Your greenhouse is now assembled! (Fig 9)

### Mini Greenhouse Cloche

Ideal for early sowings of vegetable seed crops (e.g. lettuces, broad beans) or for giving tomato, pepper, aubergine and other plants a head start.

Your cloche system is extendable, so can be used to cover rows of up to 2m (6ft) in length. The smaller parts can also be used as individual cloche covers. Cloches are easy to use, simply place the main body over the plants/seeds and place the pegs through the holes and into the soil. Attach the second body overlapping the 1st section, repeating the pegging down. To add ends, simply slide over the main body and use pegs to secure.

### Tomato Auto-Waterer

Growing tomatoes in grow bags is undoubtedly the best way to grow them, but consistent watering can be a problem, particularly during hot weather. Not any more - thanks to these handy collars. Simply place the collar around the young tomato plants at the time of planting. Each clear plastic collar will form a reservoir to reduce water run-off, ensuring that your plants are consistently fed and watered, and avoiding inconsistent cropping and damaged fruit.

### Strawberry Patio Planter

The easy way to grow strawberries on the patio. Made from durable interwoven polypropylene, these handy strawberry planters can be used year after year. Simply fill each planter with approximately 45 litres of compost and plant up the 8 handy, pre-cut side pockets with your favourite strawberry varieties.

Height: 45cm (18in). Width: 35cm (14in).

### Flower Pouch™ & Eezee™ Patio Bag

1. Mix slow-release fertiliser pellets into a general purpose compost. We recommend incredibloom® and incredicompost® for the best results
2. Fill the pouch, ensuring the compost gets right into the corners and firm it down (don't pack it really hard though).
3. Lay the flower pouch down flat and seal the open end with a clothes peg.
4. Push fingers in slits and gently push plug plants (flowers or dwarf beans/tomato/strawberry plants) in and firm compost around the roots.
5. Leave one plug plant spare and pot up in a 3 inch pot to use later (see point 9).
6. Water each plant in and leave clothes peg on.
7. Key tip! - Leave the pouch laying flat for a few weeks until plants are fully rooted. You should be able to tell by looking at the plant growth. (By leaving it flat for a few weeks you allow the roots to establish and spread and keep the compost in place).
8. Once the plants are established and growing well, remove the clothes peg, turn the right way up and hang. Choose a sunny wall or sturdy fence.
9. Now pop in the potted plant you kept back, right into the top of the pouch to ensure really full coverage.
10. Water regularly and enjoy the display or crop.

#### Eezee™ patio bag

The planting advice for Flower Pouches™ also holds for the Eezee™ Patio Bag, except of course the need to lay it down and hanging in place.

## Hanging Baskets

For best results with your hanging baskets we recommend using incredicompost® and the addition of incredibloom® at planting time. This controlled slow release fertiliser will last 7+ months, providing everything your plants need for strong growth and flowers. For summer displays we also recommend the use of a water retaining gel.

### Direct Fill Hanging Basket

This Thompson & Morgan exclusive has been designed specifically for our Postiplug and smaller plug options, allowing you to plant our smaller plugs directly into your baskets with no need for growing the plants on first. Depending on the plug size you are working with, simply pop out the matching sized hole around the side of the basket and fill with compost to the first planting tier. Insert the plugs from the outside of the basket. Once in, twist the plant 90° to lock the rootball in place. Top with more compost to the next planting tier and firm in. Repeat planting of the top tier. Once all side plants are set in place, top up with compost and firm in, leaving 2.5cm (1in) of basket rim on show to allow for good watering. The young plugs will need growing on before they can be set outside. Place the basket in a warm greenhouse or set on a windowsill until plants are large enough to plant outside. Hanging chains can be left off during the growing on process until ready to place outside.

### Easy Fill Hanging Basket

Unpackage the planting 'gates' and hanging chain and set to one side. Fill the basket with compost level to the first tier of planting holes then place a plant in each hole, setting the neck of the plant into the depression at the base of each hole. Pop the gates over the plants on the inside of the basket to hold them in place. Once the first tier is planted, add more compost to the basket, gently firming in, taking the level to the next planting tier. Add 4-6 plants to the top of the basket to finish planting then fix the hanging chains in place. The baskets can become quite heavy once watered, so hang in place before offering water. The durable Easy Fill Hanging basket will last for years. Make sure to clean thoroughly between plantings.

For a handy how-to planting video for the Easy Fill basket visit [www.thompson-morgan.com/how-to-plant-an-easy-fill-basket-for-winter](http://www.thompson-morgan.com/how-to-plant-an-easy-fill-basket-for-winter)

### Patio Pot and Saucer

Click the pot onto the saucer base, inserting the 'teeth' on the saucer into the holes on the base of the pot. Fill the pot with compost and plant up. The frost-resistant pot can be used year round. During spring and summer the saucer acts as a reservoir. Once autumn rains set in it is worth removing the saucer until spring so that compost does not sit overly wet through winter.

### Tower Pot™

Each pack contains 1 pot (38cm/15in diameter, 30cm/12in high), 1 pot saucer and a 2-part frame. Total height of pot and frame: 1.3m (4ft). Click the pot onto the saucer base, inserting the 'teeth' on the saucer into the holes on the base of the pot. Fill the pot with compost and plant up your chosen climber. Take the larger of the two tower sections and clip this to the pot by lining up the teeth with the holes on the pot rim, keeping plant stems and shoots inside the tower frame. Thread plant stems evenly around the tower frame. Plants with non-clinging stems can be tied to the frame with twine or wire until established. The top section of the tower can be set now, or left off the display until plant growth reaches the top of the first section. At this stage clip the second part on top of the first. For vigorous and/or perennial climbers with heavy top growth you may wish to insert two or three cane supports against the inside of the frame to strengthen it against the weight of the plants. We recommend wearing gloves while assembling the Tower Pot™ and when removing spent plant material from it as frame edges can be sharp.

### Solar Twizzle

With the solar panel facing upwards, fit the triangular shaped hanger into the pre-made holes and then hang this hanger onto your bracket. Hang your basket onto the hook at the bottom of the Solar Twizzle.

### Easy Fill Hanging Wall Planter

Unpackage the planting gates and fixings. Fix the metal wall bracket to the wall in the desired location. Insert the wall spacers into the two holes at the back of the planter from the outside. Fill the wall planter with compost level to the first tier of planting holes then place a plant in each hole, setting the neck of the plant into the depression at the base of each hole. Pop the gates over the plants on the inside of the planter to hold them in place. Once the first tier is planted, add more compost to the basket, gently firming in, taking the level up to the next planting tier and repeat. Finally add 4-6 plants to the top of the planter, then hook the lip at the back over the metal wall bracket. The wall planter may become quite heavy once watered, so hang in place onto the wall bracket before watering. The durable Easy Fill Hanging Wall Planter will last for years. Make sure to clean thoroughly between plantings.

### Water Wizard™

Fill a used plastic soft drinks bottle with water, screw the Water Wizard™ onto the neck of the bottle, turn the bottle upside down and place in the top of the item you are watering to enable the water to trickle through gently. The Water Wizard™ is ideal for use with patio pots, flower pouches, window boxes, hanging baskets and also in flower beds.
